

BRING YOUR OWN DEVICE

Bring Your Own Device (BYOD) is a well-established trend in businesses and part of the modern 'consumerization' of IT process. The challenge is how to enhance productivity gains while retaining enough control to ensure security and compliance to the business directives. COMMUNITAKE provides smart BYOD feature set that leads to secure working patterns, greater employee productivity and job satisfaction.

CAPABILITIES

ADMINISTRATION

COMMUNITAKE allows you to view and manage all your devices, regardless of ownership, the device attributes, and the device connectivity to your network and content. Define device settings over the air and enforce compliance to your mobile policies.

EFFICIENCIES MANAGEMENT

COMMUNITAKE facilitates flexible management of work patterns via mass configuration of device settings, on-device content, device files and mandatory applications. COMMUNITAKE on-device application enables you to backup contacts and messages for work continuity in case of device theft or loss.

SECURITY MANAGEMENT

COMMUNITAKE enables you to secure messages in a safe container; view only SharePoint files via a secure container; access emails which only reside on a remote server (optional); access secure email and perform file edits via a dedicated container linked to highly secured, appliance driven VPN. Remove all business content and access when a device un-enrolls.

COLLABORATION

COMMUNITAKE provides you with the ability to ask a contact for assistance from your device via remote takeover. Once approved, a professional can provide you guidance and help by completely taking over your device.

AVAILABILITY & DOWNTIME MANAGEMENT

COMMUNITAKE deploys on-device application for seamless automated diagnostics and auto repair of common device pain-points. It allows you to assume complete control over the device from afar and provide hands-on support.

DISTRACTIONS MANAGEMENT

COMMUNITAKE enables you to reduce the impact of possible distractions: block the access to web sites; prohibit the access to applications; restrict device's services; and define limitations by device time and device location.

USAGE CONTROL

COMMUNITAKE allows monitoring in near real-time the mobile usage levels of calls, messages and data – both for local and roaming use. Send alerts on exceeded usage and eliminate bill shock due to careless usage.

SELF SERVICE

COMMUNITAKE enables you to grant device holders the ability to perform self-data recovery, including device locate, alarm, lock, wipe, selective wipe, data backup and password reset.

PRIVACY

COMMUNITAKE provides you with the flexibility to block data collection of locations and applications to maintain device holder's privacy.

VALUE

1

SMART AFFORDABLE AND EASY TO SETUP BYOD

- ▼ Simplifies management via an intuitive GUI requiring minimal IT knowledge
- ▼ Increases efficiencies via one-and-done definitions
- ▼ Delivers best value, best priced enterprise mobility solution

2

SEAMLESS MOBILITY AND PRODUCTIVITY

- ▼ Locks down devices for generating higher focus on work tasks
- ▼ Increases employee's satisfaction via minimal interference to private device use
- ▼ Eliminates redundant usage and saves on expenditures via a granular control

3

HIGHLY SECURE COMMUNICATION AND CONTENT

- ▼ Secures access to organizational content and email
- ▼ Maintains security across all communications and on-device content
- ▼ Enables quick recovery from lost / stolen device scenarios

TECHNOLOGY

- ▼ COMMUNITAKE supports Android (2.3+), iOS (5.0+), WP (8.1+). (Note: features vary by the operating system).
- ▼ Cloud based solution or on-premises deployment along with White-label branding.
- ▼ Multi-tenant, highly scalable and redundant architecture.

COMMUNITAKE delivers a comprehensive Mobility platform that unifies robust multi-channel support with highly secure device, smart Enterprise Mobility Management, and core Android Internet of Things. The CommuniTake solutions suite (1) turns support to be the hallmark of a successful service provider; (2) manages mobile resources, processes and security to effectively operate business mobility; (3) enables complete wiretapping protection for mobile devices; (4) and facilitates seamless performance for connected Android machines. CommuniTake proven success features superior technology; advanced functionality; flexible delivery methods; and white label models. CommuniTake products are deployed by foremost operators and businesses worldwide.
