

MOBILE APPLICATIONS MANAGEMENT

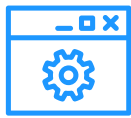

Modern Enterprise Mobility Management is as much about managing mobile applications as it is about managing mobile assets. Businesses are facing a chaotic state in which they need to deploy their own applications, manage applications in BYOD programs and control hazardous applications. COMMUNITAKE Mobile Applications Management uniquely combines comprehensive applications management, automated applications deployment and applications support.

CAPABILITIES

APPLICATIONS PURCHASE

COMMUNITAKE forms an enterprise catalog making it easy for the employees to access and install applications as recommended by the business. COMMUNITAKE integrates with the Apple Volume Purchase Program (VPP) enabling to allocate and distribute applications to users.

APPLICATIONS DEPLOYMENT

COMMUNITAKE enables mass deployment of applications via policies. COMMUNITAKE silently installs mandatory applications; removes prohibited applications; and defines lock mode in which only allowed applications can run on the device. IT personnel can guide device holders on how to best operate applications from afar using remote control capabilities.

APPLICATIONS SECURITY

COMMUNITAKE enables you to restrict access to pre-installed applications on a device, like Bluetooth or camera, and disables access to public applications stores. COMMUNITAKE allows flexible applications use definition in BYOD programs by time or by premise. The system activates automated sanctions enforcement on compromised devices.

APPLICATIONS ANALYTICS

COMMUNITAKE allows you to track installed, whitelisted and blacklisted applications. Pre-defined business views give you visibility into applications use and the compliance with applications policies. It provides the flexibility to disable private data collection for BYOD devices.

SELF SERVICE

COMMUNITAKE enables device holders to install recommended applications from the enterprise catalog. The system runs on-device diagnostics for applications that consume high levels of device resources for improved device utilization.

VALUE

1

SMART APPLICATIONS POLICIES MANAGEMENT

- ▼ One-and-done policies management avoiding the need to work by operating systems silos
- ▼ Easy definition of prohibited applications from an accumulated list across enrolled devices
- ▼ Dynamic mass distribution of applications via Whitelisting with no complicated campaigns

2

ROBUST CONTROL

- ▼ Multi-dimensional applications control: mandatory; prohibited; recommended
- ▼ Ability to lock the device by allowed only applications
- ▼ Automated events driven enforcement

3

SEAMLESS MOBILITY AND PRODUCTIVITY

- ▼ Intuitive and flexible BYOD programs management
- ▼ Remote guidance on how to operate applications
- ▼ Improved device utilization via on-device diagnostics

TECHNOLOGY

- ▼ COMMUNITAKE supports Android (2.3+), iOS (5.0+) and WP (8.1+).
- ▼ Seamless integration with Active Directory and ActiveSync email servers
- ▼ Cloud based solution or on-premises deployment along with White-label branding.
- ▼ Multi-tenant, highly scalable and redundant architecture.

WHAT MAKES IT REMARKABLE?

automated mass deployment

one-and-done management

smart BYOD **remote guidance**

easy management and control

COMMUNITAKE delivers a comprehensive Mobility platform that unifies robust multi-channel support with highly secure device, smart Enterprise Mobility Management, and core Android Internet of Things. The CommuniTake solutions suite (1) turns support to be the hallmark of a successful service provider; (2) manages mobile resources, processes and security to effectively operate business mobility; (3) enables complete wiretapping protection for mobile devices; (4) and facilitates seamless performance for connected Android machines. CommuniTake proven success features superior technology; advanced functionality; flexible delivery methods; and white label models. CommuniTake products are deployed by foremost operators and businesses worldwide.
