

MOBILE DEVICE MANAGEMENT

COMMUNITAKE's Mobile Device Management (MDM) feature set simplifies the way businesses address their mobility challenges. CommuniTake's MDM provides intuitive inventory management, smart automation, comprehensive control and high reliability across the business mobility infrastructure.

CAPABILITIES

CENTRAL MANAGEMENT CONSOLE

COMMUNITAKE provides you with a quick snapshot of the enrolled mobile devices, regardless of ownership. The central console contains configurable dashboard, tabular views and predefined business views that ease mobile assets visibility, security and compliance.

SET-UP AND ENROLLMENT

Enrollment is managed via an invitation from the system. or via self service based on Active Directory credentials. Devices can be added manually or via a bulk upload. Devices are arranged by hierarchical groups that trigger an inheritance mechanism. Groups can be manually defined or automatically built via synchronized integration with the business Active Directory.

ASSETS MANAGEMENT

COMMUNITAKE MDM provides you a complete management of the devices inventory including, ownership, dynamic mass deployments and compliance with policies and configurations. You can ensure that the right users have the right devices and applications.

SECURITY AND COMPLIANCE

COMMUNITAKE secures devices by the following: (1) controlled access - for devices and content; (2) avoidance - for hazardous applications and unsafe sites; (3) containerization - for content and messages; (4) recovery - for data and stolen / lost devices; (5) compliance automation - via events driven enforcement.

POLICIES MANAGEMENT

The system's policies define the device behavior and use across device password, device applications, device use, device display, access to content, browser use, data backup, and data collection. Mass content distribution is conducted as a policy, simplifying the campaign process and its provisioning.

AUTOMATION

COMMUNITAKE automates the enterprise device provisioning, usage monitoring, device support and policy enforcement processes. You can centrally define actions, sanctions, content, configurations and alerts.

SUPPORT AND COLLABORATION

COMMUNITAKE provides IT personnel with the ability to remotely control a device and provide support as if they are holding the device in their hands. Support can be enhanced with an on-device diagnostics and auto repair application. Professionals can share their device with others for guidance and consultation from afar.

SELF SERVICE

COMMUNITAKE enables you to grant device holders the ability to perform self-data recovery including device locate, alarm, lock, wipe, selective wipe, data backup and password reset.

TECHNOLOGY

- ▼ Supports Android (2.3+), iOS (5.0+) WP (8.1+) (features vary by operating system).
- ▼ Seamless integration with Active Directory and ActiveSync email servers.
- ▼ Cloud based solution or on-premises deployment along with White-label branding.
