

USAGE CONTROL

Mobile devices are highly instrumental in the digital life style of businesses. With the increased use of mobile services, businesses are required to apply an effective range of intelligent controls, including managing usage for extensive sets of usage plans. These controls are implemented to eliminate bill shock and gain better usage alignment for saving capital expenses. COMMUNITAKE provides a smart approach to usage management, giving businesses comprehensive near real-time usage control.

CAPABILITIES

USAGE PLANS BUILDER

COMMUNITAKE features a highly-configurable usage plans builder for creating diverse plans. Usage plans contain data, voice minutes and messages – both local and roaming. For each parameter, you can define an unlimited usage or a threshold and the usage level for which an alert will be triggered.

CENTRALIZED MONITORING

COMMUNITAKE monitors the communications usage by the device-based counters. There is no dependency on integration with external billing systems. Usage is accumulated for every device by flexible enforcement time points, allowing real – time control.

DYNAMIC ALERTS

COMMUNITAKE enables you to define alerts on exceeded usage to meet the need for controlled usage. You can define the alerts recipients, the alerts text, the alerts initiation time and the duration of the alerts publication.

USAGE TRANSPARENCY

COMMUNITAKE provides usage transparency by device, communication type and usage level. It governs usage without interfering with the ongoing work of the device holder.

VALUE

- 1 Eliminates redundant usage and saves on expenditures via a granular usage control
- 2 Improves telecom procurement by tracking and correlating usage with device holders
- 3 Measures and governs a wide variety of usage plans via an easy to define mechanism

TECHNOLOGY

- ▼ COMMUNITAKE Supports Android (2.3+), iOS (5.0+) (features vary by operating system).
- ▼ Seamless integration with Active Directory and ActiveSync email servers.
- ▼ Cloud based solution or on-premises deployment along with White-label branding.
- ▼ Multi-tenant, highly scalable and redundant architecture.

WHAT MAKES IT REMARKABLE?

Easy to define process
Stand-alone controller
Real time monitoring
Governs without interference

COMMUNITAKE delivers a comprehensive Mobility platform that unifies robust multi-channel support with highly secure device, smart Enterprise Mobility Management, and core Android Internet of Things. The CommuniTake solutions suite (1) turns support to be the hallmark of a successful service provider; (2) manages mobile resources, processes and security to effectively operate business mobility; (3) enables complete wiretapping protection for mobile devices; (4) and facilitates seamless performance for connected Android machines. CommuniTake proven success features superior technology; advanced functionality; flexible delivery methods; and white label models. CommuniTake products are deployed by foremost operators and businesses worldwide.
